

Project Design Phase
Proposed Solution Template

Date	1 July 2026
Team ID	
Project Name	Credit Card Approval Prediction
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Banks receive a large number of credit card applications. Manual verification takes time and may lead to errors. A system is needed to quickly and accurately predict whether a credit card application should be approved or rejected.
2.	Idea / Solution description	Develop a machine learning-based web application that analyzes applicant details such as income, employment status, age, and credit history to predict credit card approval. The system provides fast and accurate approval predictions.

3.	Novelty / Uniqueness	The proposed solution uses machine learning to automate the approval process, reducing manual effort, improving prediction accuracy, and providing instant results through a user-friendly interface.
4.	Social Impact / Customer Satisfaction	Customers receive quicker responses to their applications, while banks reduce processing time and human errors. This improves customer satisfaction and increases operational efficiency.
5.	Business Model (Revenue Model)	The system can be offered to banks and financial institutions as a subscription-based Software-as-a-Service (SaaS) platform or through annual licensing and maintenance contracts.
6.	Scalability of the Solution	The solution can be deployed on cloud platforms and easily scaled to support multiple banks, thousands of users, and a growing number of credit card applications without significant performance loss.
